Subject: FoldTite door stands up to wind

Dave,

I thought I would let you know how your FoldTite door stood up to high winds. We recently had a storm that produced extremely high winds and the door I got from you past the test with flying colors. A neighbor a mile north of me had his anemometer register 114 mph winds and another neighbor a mile south of me had his anemometer register 118 mph. This door took the winds straight on and I can't even find so much as a bow in them. I am impressed at how well they stood up to such punishment. Thanks for producing such a fine product.

Sincerely
Tim Carter
